

I'm Vinayak, an AI & ML graduate with strong skills in SQL and troubleshooting. I have hands-on experience in debugging issues, validating data, and working with APIs. I'm particularly interested in this role because I enjoy solving real-world system issues and ensuring smooth support for customers.

I have worked on troubleshooting issues by analyzing logs, validating data using SQL, and testing APIs through Postman. In my project, I identified transaction failures by checking database inconsistencies, which helped me improve my debugging approach.

I'm interested in this role because it combines troubleshooting, SQL, and real-world system interaction. I enjoy analyzing issues, working with data, and identifying root causes. This role also gives me an opportunity to work on live customer problems, which will help me strengthen both my technical and communication skills

3. What are your strengths?

✅ Answer:

My key strengths are problem-solving and a structured approach to troubleshooting. I stay calm while analyzing issues and try to break them down step-by-step. I also have a good foundation in SQL and debugging, which helps me identify and resolve issues efficiently.

⚠️ 4. What is your biggest weakness?

✅ Safe & smart answer:

One area I'm improving is that I sometimes spend extra time understanding the root cause in detail. While this helps me learn deeply, I'm working on balancing it with faster resolution by prioritizing effectively

I have strong troubleshooting and SQL skills, along with a structured approach to problem-solving. I'm calm under pressure, communicate clearly, and I'm eager to learn, which makes me a good fit for this support role.

I see myself growing into a technically strong professional, handling complex issues and taking on more responsibilities, while continuously improving my skills.

I'm motivated by solving real-world technical issues, analyzing root causes, and ensuring smooth system functionality while helping customers effectively.

Verint is a global company that focuses on Customer Experience (CX) automation. It provides solutions that help organizations improve customer engagement, optimize workforce productivity, and use data-driven insights to enhance their services.

Verint is a global company focused on customer experience and automation solutions. I want to join because this role aligns with my interest in troubleshooting and working on real-world systems, and it offers good learning opportunities.

Q: What is your experience with Java/Python?

I have used Java and Python for building basic applications and understanding programming concepts. I'm comfortable with logic building, handling conditions, and writing clean code. I mainly used Python in backend-related tasks and debugging.

FASTAPI

Q: What is FastAPI?

FastAPI is a Python framework used to build APIs quickly and efficiently. It allows handling requests, responses, and backend logic in a structured way.

Q: What did you do using FastAPI?

I used FastAPI to create APIs, handle requests, and test endpoints using Postman. I also worked on validating inputs and debugging API responses.

HTML / CSS / JS

Q: Do you have frontend knowledge?

Yes, I have basic knowledge of HTML, CSS, and JavaScript, which helps me understand how frontend interacts with backend systems.

 (Don't go deep unless asked)

POSTMAN

Q: What is Postman?

Postman is a tool used to test APIs by sending requests and analyzing responses.

Q: How have you used Postman?

I used Postman to test API endpoints, verify responses, and debug issues by checking status codes and data returned from the server.

DEBUGGING

Q: What is debugging?

Debugging is the process of identifying and fixing errors in a system.

Q: How do you debug issues?

I follow a structured approach: understand the issue, check logs, identify where it fails, and isolate the root cause step-by-step.

TROUBLESHOOTING (VERY IMPORTANT)

Q: What is troubleshooting?

Troubleshooting is identifying, analyzing, and resolving issues in a system.

Q: How do you troubleshoot?

I first understand the problem, then reproduce it if possible, check logs or errors, validate data, and then fix or escalate if needed.

API HANDLING

Q: What is an API?

An API allows communication between two systems, like a frontend application communicating with a backend server.

Q: How have you worked with APIs?

I have used APIs in FastAPI and tested them using Postman by sending requests and analyzing responses.

ACCESS CONTROL

Q: What is access control?

Access control is managing what actions a user can perform in a system, such as read, write, or admin access.

Q: Why is it important?

It ensures security and that users only access what they are authorized to.

HTTP / HTTPS

Q: What is HTTP/HTTPS?

HTTP is a protocol used for communication between client and server, while HTTPS is a secure version with encryption.

Q: What are status codes?

Status codes indicate the result of a request, like 200 for success, 404 for not found, and 500 for server error.

TCP/IP

Q: What is TCP/IP?

TCP/IP is a set of protocols that allows communication between systems over a network.

OSI MODEL

Q: What is OSI model?

It is a conceptual model that explains how data travels through different layers in a network.

👉 If they push:

Just say:

It has 7 layers, from physical to application layer

VPN

Q: What is VPN?

VPN is a secure connection that allows users to access systems remotely over a private network.

CRM (VERY IMPORTANT 🔥)

Mention:

👉 Salesforce CRM

Q: What is CRM?

CRM is used to manage customer data, interactions, and support activities.

Q: How is CRM used in support role?

It helps track customer issues, update information, manage requests, and ensure proper support handling.

GIT

? Q: What is Git?

Git is a version control system used to track code changes and collaborate with others.

VS CODE

? Q: What is VS Code?

VS Code is a code editor used for writing, debugging, and managing code efficiently.

1. What are the layers in TCP/IP?

✓ Answer:

TCP/IP has 4 layers: Application, Transport, Internet, and Network Access. Each layer handles a part of communication, like sending data, routing it, and delivering it to the correct system.

? 2. Difference between TCP and IP?

✓ Answer:

TCP ensures reliable delivery of data by checking if all packets are received correctly, while IP is responsible for addressing and routing the data to the correct destination.

? 3. What is a packet?

✓ Answer:

A packet is a small unit of data that is broken from a larger message and sent over the network. Each packet contains part of the data along with source and destination information.

? 4. What happens if packets are lost?

✓ Answer:

TCP detects missing packets and retransmits them to ensure complete and correct delivery.

★ (This is a very good answer — shows understanding)

5. What is port number?

Answer:

A port number helps identify a specific service or application on a system, like HTTP uses port 80 and HTTPS uses port 443.

1. What is SQL?

SQL is used to interact with databases to store, retrieve, update, and delete data.

2. What is a database?

A database is a structured collection of data stored in tables.

3. What is a table?

A table stores data in rows and columns.

4. Difference between SQL and DBMS?

SQL is a language, DBMS is software that manages databases.

QUERIES (VERY IMPORTANT 🔥)

5. What is SELECT?

```
SELECT * FROM users;
```

Used to fetch data from a table.

6. What is WHERE?

```
SELECT * FROM users WHERE status = 'active';
```

Used to filter records.

7. Difference between WHERE and HAVING?

WHERE filters before grouping, HAVING filters after grouping.

JOINS (MOST IMPORTANT 🔥🔥)

8. What is JOIN?

Used to combine data from multiple tables.

9. Types of JOIN?

INNER JOIN

```
SELECT * FROM A INNER JOIN B ON A.id = B.id;
```

Returns matching records

LEFT JOIN

```
SELECT * FROM A LEFT JOIN B ON A.id = B.id;
```

Returns all from left + matched from right

RIGHT JOIN

Opposite of LEFT JOIN

10. Difference between INNER and LEFT JOIN?

INNER gives matching only, LEFT gives all from left + matches

AGGREGATE FUNCTIONS

11. What is COUNT?

```
SELECT COUNT(*) FROM users;
```

12. Other functions?

SUM, AVG, MAX, MIN

GROUPING

13. What is GROUP BY?

```
SELECT department, COUNT(*) FROM employees GROUP BY department;
```

Groups data

14. What is HAVING?

```
SELECT department, COUNT(*)  
FROM employees  
GROUP BY department  
HAVING COUNT(*) > 5;
```

Filters grouped data

PRACTICAL QUESTIONS (VERY LIKELY 🔥)

15. Find duplicate records

```
SELECT name, COUNT(*)  
FROM users  
GROUP BY name  
HAVING COUNT(*) > 1;
```

16. Get second highest salary

```
SELECT MAX(salary)  
FROM employees  
WHERE salary < (SELECT MAX(salary) FROM employees);
```

17. Difference between DELETE, TRUNCATE, DROP?

Command Meaning

DELETE Removes selected rows

TRUNCATE Removes all rows

DROP Deletes table

Explain your Internship

Best answer (use this)

During my internship at KodNest Technologies, I worked on identifying and troubleshooting issues in application workflows. I analyzed logs to understand system behavior and debug errors. I also used SQL to perform backend data validation and identify inconsistencies.

I handled multiple test scenarios where I diagnosed issues step-by-step, which helped improve my problem-solving skills and understanding of real-world system issues.

Explain your project (correct version)

In my E-Banking System project, I worked on a testing and application support-based system where we simulated real-world banking workflows like login, fund transfers, and account validation.

My main role was to test different scenarios, identify issues, and analyze transaction failures. I used logs and SQL queries to validate backend data and understand why certain transactions were failing.

I also performed root cause analysis to identify defects and ensure the system behaved correctly under different conditions.

.

Explain your second project (SQL one)

Answer

In this project, I focused on analyzing transaction failures using SQL. I wrote queries to identify missing, failed, and inconsistent records. I also analyzed patterns in failures to understand root causes and ensured data integrity through validation.

Academic Project (Short Answer)

I worked on a Disaster Management project using NLP. My role was collecting and cleaning data from different sources. I performed preprocessing like removing noise and structuring data to ensure it was ready for analysis.

Add-on line (optional)

This helped me understand the importance of clean data for accurate results.

What is NLP?

NLP is a field of AI that helps computers understand and process human language.

How is it useful?

It helps analyze large text data and extract useful information, especially in real-world scenarios like disaster response.
