

ONEFIN – GROOMING DOCUMENT

Role: Application Support Engineer

Role Type: L1 Application Support + Production Support + Customer Issue Handling

Salary: 4 LPA

Location: Bangalore – Work from Office

Interview Location: Bangalore – KodNest Premises

Tentative Interview Date: 13th July 2026

1. Company Overview

OneFin is a B2B fintech technology company. It provides software solutions and APIs to banks, NBFCs, fintech companies, startups, and financial businesses.

In simple words, OneFin helps companies manage lending, loan underwriting, loan collection, loan management, and co-lending workflows through technology.

This is a good opportunity for students who want to start their career in the fintech domain, production support, API support, customer issue handling, troubleshooting, and SaaS product operations.

2. Role Overview

The role is **Application Support Engineer**.

This is not a pure development role. This is mainly an **L1 application support and production support role**.

As an Application Support Engineer, you will be the first point of contact when customers face issues in the live product. You will check the issue, follow SOPs, perform basic troubleshooting, check API request-response, review logs, monitor dashboards, validate configurations, and escalate the issue to Integration Engineering or Development teams if required.

In simple words:

You will make sure that customer issues are handled quickly, properly documented, and resolved or escalated in the right way.

This role is very useful for freshers because it gives exposure to:

APIs

JSON

HTTP

Webhooks

Logs

Monitoring dashboards

Ticketing tools

Production issues

Customer communication

Banking / NBFC / lending workflows

Real SaaS product support

3. Job Profile at a Glance

Detail	Information
Company	OneFin
Website	www.onefin.in
Role	Application Support Engineer
Salary	4 LPA
Location	Bangalore – Work from Office
Required Skills	APIs, JSON, HTTP, Webhooks, Good Communication
Qualification	Any as per drive details
Specialization	Any
Year of Passing	Any
Graduation Criteria	7 CGPA and above
10th and 12th Criteria	60% and above
Gap in Education	Allowed
Backlogs	No active backlogs

Bond	No
Certificate Submission	Only for verification
Training Period	NA
Interview Type	Face to Face
Interview Location	Bangalore – KodNest Premises
Tentative Date	13th July 2026

4. Very Important Role Clarity

Students must understand this clearly before attending the drive.

This is an **Application Support Engineer** role.

It is not a pure coding role.

It is not a pure development role.

It is not only customer care.

It is a technical support role where you will work on live application issues.

You will need technical understanding, communication skills, patience, troubleshooting ability, documentation discipline, and customer-handling maturity.

Best role understanding answer:

“From my understanding, the Application Support Engineer role is an L1 production support role where I will handle customer-reported issues, follow SOPs, perform basic troubleshooting, check API request-response, review logs, monitor dashboards, validate workflows, document incidents, and escalate issues to the correct internal team when required. I understand this is not a pure development role, but it needs strong technical basics, communication skills, attention to detail, and ownership.”

Students should practice this answer properly.

5. Key Responsibilities

1. Incident Handling and Production Support

You will handle customer issues coming through ticketing tools, email, or WhatsApp.

You will check what problem the customer is facing and try to resolve it using SOPs and knowledge base articles.

2. API Request-Response Checks

If an API is failing, you may need to check the request, response, status code, headers, payload, and error message.

3. Log Review

You may need to read basic logs using dashboards or read-only tools. Logs help identify what happened inside the system.

4. Reconciliation Checks

You may need to verify whether data is matching between systems. For example, payment status, loan status, customer record, or workflow status.

5. Workflow Status Checks

You may need to check whether a process is completed, pending, failed, or stuck.

6. Configuration Validation

Sometimes issues happen because of incorrect configuration. You may need to check whether the right configuration is enabled for the customer.

7. Escalation and Coordination

If the issue cannot be solved at L1 level, you will escalate it to the Integration Engineering team or Development team with proper details.

8. Monitoring and Alerts

You will monitor dashboards, queues, APIs, scheduled jobs, and integration pipelines. If an alert comes, you should follow the SOP and take quick action.

9. Documentation and SOP Adherence

You must document every issue properly. Support roles require clean ticket updates, proper notes, screenshots, observations, and escalation details.

10. Customer Interaction

You will communicate updates, resolutions, and workarounds to customers professionally.

6. Required Skills

Technical Skills

APIs

You should understand how APIs allow two systems to communicate. This is important because OneFin works with clients, banks, NBFCs, and fintech systems.

JSON

You should understand JSON structure because API request and response data is usually sent in JSON format.

HTTP

You should know HTTP methods and status codes. This helps you understand whether an API call is successful, failed due to client error, or failed due to server error.

Webhooks

You should know that webhooks are automatic notifications sent from one system to another when an event happens.

Logs

You should be able to read basic logs and identify error messages, timestamps, request IDs, and failure reasons.

Monitoring Tools

You should understand that dashboards are used to monitor live systems, queues, APIs, scheduled jobs, and alerts.

SaaS Systems

OneFin is a product/platform company. Understanding SaaS means understanding that customers use software hosted by the company.

Programming / Coding Skills

The role does not mainly focus on development, but basic coding and problem-solving may be tested.

Prepare:

Strings

Arrays

Loops

Conditions

Functions

Basic data validation

Frequency counting

Simple searching

Simple sorting

Basic log-style problems

Basic ticket-status problems

For coding round, Java solutions are provided in this document for practice.

Tools / Platforms

Postman

Used to test APIs.

Ticketing tools

Jira, Freshdesk, Zendesk, or similar tools may be used to track customer issues.

Monitoring dashboards

Used to monitor live systems, alerts, queues, and scheduled jobs.

SQL / database tools

Useful for checking application data if required.

Excel / Google Sheets

Useful for tracking issues, reports, and reconciliation checks.

Communication and Professional Skills

Clear communication

Customer handling

Patience

Attention to detail

Documentation discipline

Ownership mindset

Ability to follow SOPs

Ability to work in a fast-paced environment

Professional escalation

7. Selection Process

Round	Round Name	Mode / Type
Round 1	Profile Screening	Resume-based screening
Round 2	Aptitude + Coding Round	Face to Face
Round 3	Technical Interview 1	Face to Face
Round 4	Technical Interview 2	Face to Face
Round 5	Managerial Round	Face to Face
Round 6	HR Interview	Face to Face

ROUND 1 – PROFILE SCREENING

What happens in this round

Round 1 is a resume-based profile screening round. This is not a face-to-face interview.

The company will mainly check whether your resume matches the role requirements.

They may check:

Education details

Percentage / CGPA

Backlog status

Skills mentioned in resume

Project details

Communication-related points

API / JSON / HTTP knowledge

Customer support or troubleshooting mindset

Suitability for application support role

What your resume should show

Your resume should clearly show that you are suitable for an Application Support Engineer role.

Highlight:

API basics

JSON basics

HTTP basics

Webhooks understanding

Any project with backend/database/API flow

Troubleshooting mindset

Good communication

Documentation ability

Customer-handling ability

Willingness to work in production support

Good Resume Summary

“Enthusiastic fresher with basic knowledge of APIs, JSON, HTTP, web-based systems, and application support concepts. Interested in production support, troubleshooting, customer issue handling, monitoring, and SaaS product operations. Good communication skills, attention to detail, and willingness to learn fintech workflows.”

Good Resume Points

Basic understanding of API request-response flow.

Familiar with JSON structure and HTTP status codes.

Good understanding of web-based application flow.

Strong interest in application support and troubleshooting.

Ability to document issues clearly and follow processes.

Good communication and customer-handling skills.

Worked on academic project involving database or backend logic.

Common Mistakes to Avoid

Do not submit an outdated resume.

Do not mention fake skills.

Do not write “expert in APIs” if you cannot explain basics.

Do not add too many unrelated technologies.

Do not make the resume look only like a development resume.

Do not mention projects that you cannot explain.

Do not keep spelling or formatting mistakes.

ROUND 2 – APTITUDE + CODING ROUND

What happens in this round

This round may check logical reasoning, basic aptitude, and basic coding ability.

For this role, coding may not be very advanced. The company may check whether you can think logically, write basic programs, and solve simple real-life support-style problems.

Aptitude Topics to Prepare

Number series

Alphabet series

Coding-decoding

Blood relations

Directions

Syllogism

Odd one out

Percentages

Average

Ratio and proportion

Profit and loss

Time and work

Time, speed, distance

Basic probability

Simple logical puzzles

Aptitude Question 1

Find the next number: 2, 4, 8, 16, 32, ?

A. 48

B. 54

C. 64

D. 72

Correct Answer: C. 64

Explanation:

Each number is multiplied by 2.

$$32 \times 2 = 64.$$

Aptitude Question 2

If 25% of a number is 80, what is the number?

A. 200

B. 240

C. 300

D. 320

Correct Answer: D. 320

Explanation:

25% means $\frac{1}{4}$.

If $\frac{1}{4}$ of the number is 80, then full number = $80 \times 4 = 320$.

Aptitude Question 3

The average of 10, 20, 30, 40, and 50 is:

- A. 20
- B. 25
- C. 30
- D. 35

Correct Answer: C. 30

Explanation:

$$\text{Sum} = 10 + 20 + 30 + 40 + 50 = 150$$

$$\text{Average} = 150 / 5 = 30$$

Aptitude Question 4

A product is bought for ₹800 and sold for ₹1000. Find the profit percentage.

- A. 20%
- B. 25%
- C. 30%
- D. 35%

Correct Answer: B. 25%

Explanation:

$$\text{Profit} = 1000 - 800 = 200$$

$$\text{Profit \%} = 200 / 800 \times 100 = 25\%$$

Aptitude Question 5

A person travels 150 km in 3 hours. What is the speed?

- A. 30 km/h
- B. 40 km/h
- C. 50 km/h
- D. 60 km/h

Correct Answer: C. 50 km/h

Explanation:

Speed = Distance / Time

Speed = $150 / 3 = 50$ km/h

Aptitude Question 6

If 6 workers complete a task in 12 days, how many days will 12 workers take?

A. 4 days

B. 6 days

C. 8 days

D. 12 days

Correct Answer: B. 6 days

Explanation:

More workers means less time.

Total work = $6 \times 12 = 72$ worker-days

12 workers will take $72 / 12 = 6$ days.

Aptitude Question 7

Find the next term: 1, 4, 9, 16, 25, ?

A. 30

B. 32

C. 36

D. 49

Correct Answer: C. 36

Explanation:

These are square numbers.

$1^2, 2^2, 3^2, 4^2, 5^2, 6^2 = 36$

Aptitude Question 8

If CAT is coded as DBU, then DOG is coded as:

- A. EPH
- B. ENH
- C. FPH
- D. DPH

Correct Answer: A. EPH

Explanation:

Each letter is shifted by +1.

D → E, O → P, G → H

So DOG = EPH.

Aptitude Question 9

A person walks 5 km north, 3 km east, and 5 km south. How far is he from the starting point?

- A. 2 km
- B. 3 km
- C. 5 km
- D. 8 km

Correct Answer: B. 3 km

Explanation:

5 km north and 5 km south cancel each other.

Only 3 km east remains.

Aptitude Question 10

Which one is different?

- A. API
- B. JSON

C. HTTP

D. Mango

Correct Answer: D. Mango

Explanation:

API, JSON, and HTTP are technical terms. Mango is a fruit.

Aptitude Question 11

Which HTTP status code means success?

A. 200

B. 400

C. 401

D. 500

Correct Answer: A. 200

Explanation:

HTTP 200 means the request was successful.

Aptitude Question 12

Which HTTP status code usually means server-side error?

A. 200

B. 400

C. 404

D. 500

Correct Answer: D. 500

Explanation:

500 means Internal Server Error. It usually indicates a server-side problem.

Aptitude Question 13

Which of the following is valid JSON?

- A. {name: Ravi}
- B. {"name": "Ravi"}
- C. {name = Ravi}
- D. ['name': 'Ravi']

Correct Answer: B. {"name": "Ravi"}

Explanation:

Valid JSON uses double quotes for keys and string values.

Aptitude Question 14

A ticket was created at 10:00 AM and first response was sent at 10:15 AM. What is the First Response Time?

- A. 5 minutes
- B. 10 minutes
- C. 15 minutes
- D. 30 minutes

Correct Answer: C. 15 minutes

Explanation:

First Response Time = Time of first response - Ticket creation time

10:15 - 10:00 = 15 minutes.

Aptitude Question 15

If an issue affects all customers, its severity is usually:

- A. Low
- B. Medium
- C. High
- D. No severity

Correct Answer: C. High

Explanation:

If many or all customers are affected, the business impact is high. So the issue should be treated as high severity.

Coding Round Preparation

Important Coding Topics

Strings

Arrays

HashMap

Loops

Conditions

Functions

Counting problems

Duplicate finding

Status code counting

Simple ticket-based logic

Basic validation

Coding Question 1 – Reverse a String

Problem Statement:

Given a string, print the reverse of the string.

Sample Input:

onefin

Sample Output:

nifeno

Logic:

Start from the last character and build the reversed string.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);
        String str = sc.nextLine();

        String reversed = "";

        for (int i = str.length() - 1; i >= 0; i--) {
            reversed += str.charAt(i);
        }

        System.out.println(reversed);
    }
}
```

Time Complexity: $O(n)$

Space Complexity: $O(n)$

Coding Question 2 – Check Palindrome

Problem Statement:

Given a string, check whether it is a palindrome.

Sample Input:

madam

Sample Output:

Palindrome

Logic:

A string is a palindrome if it reads the same from left and right.

Java Solution:

```
import java.util.*;

public class Main {
```

```
public static void main(String[] args) {
    Scanner sc = new Scanner(System.in);
    String str = sc.nextLine();

    String reversed = "";

    for (int i = str.length() - 1; i >= 0; i--) {
        reversed += str.charAt(i);
    }

    if (str.equals(reversed)) {
        System.out.println("Palindrome");
    } else {
        System.out.println("Not Palindrome");
    }
}
```

Time Complexity: $O(n)$

Space Complexity: $O(n)$

Coding Question 3 – Count API Status Codes

Problem Statement:

Given a list of API status codes, count how many times each status code appears.

Sample Input:

```
6
200 200 400 401 500 200
```

Sample Output:

```
200 3
400 1
401 1
500 1
```

Logic:

Use HashMap to count frequency of every status code.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        HashMap<Integer, Integer> map = new HashMap<>();

        for (int i = 0; i < n; i++) {
            int code = sc.nextInt();
            map.put(code, map.getOrDefault(code, 0) + 1);
        }

        for (Integer code : map.keySet()) {
            System.out.println(code + " " + map.get(code));
        }
    }
}
```

Time Complexity: $O(n)$

Space Complexity: $O(k)$, where k is number of unique status codes.

Coding Question 4 – Count Failed API Calls**Problem Statement:**

Given API status codes, count how many calls failed. Any status code greater than or equal to 400 is considered failed.

Sample Input:

```
7
200 201 400 404 500 200 401
```

Sample Output:

```
4
```

Logic:

Loop through all status codes and count codes greater than or equal to 400.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        int failedCount = 0;

        for (int i = 0; i < n; i++) {
            int code = sc.nextInt();

            if (code >= 400) {
                failedCount++;
            }
        }

        System.out.println(failedCount);
    }
}
```

Time Complexity: $O(n)$

Space Complexity: $O(1)$

Coding Question 5 – Find Duplicate Ticket IDs**Problem Statement:**

Given ticket IDs, print the duplicate ticket IDs.

Sample Input:

7

101 102 103 102 104 101 105

Sample Output:

101 102

Logic:

Use HashMap to count frequency. Print IDs whose count is greater than 1.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        HashMap<Integer, Integer> map = new HashMap<>();

        for (int i = 0; i < n; i++) {
            int ticketId = sc.nextInt();
            map.put(ticketId, map.getOrDefault(ticketId, 0) + 1);
        }

        ArrayList<Integer> duplicates = new ArrayList<>();

        for (Integer id : map.keySet()) {
            if (map.get(id) > 1) {
                duplicates.add(id);
            }
        }

        Collections.sort(duplicates);

        for (int id : duplicates) {
            System.out.print(id + " ");
        }
    }
}
```

Time Complexity: $O(n \log n)$

Space Complexity: $O(n)$

Coding Question 6 – Validate Mobile Number

Problem Statement:

Given a mobile number as a string, check whether it has exactly 10 digits.

Sample Input:

9876543210

Sample Output:

Valid

Logic:

Check length and ensure every character is a digit.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        String mobile = sc.nextLine();
        boolean isValid = true;

        if (mobile.length() != 10) {
            isValid = false;
        } else {
            for (int i = 0; i < mobile.length(); i++) {
                if (!Character.isDigit(mobile.charAt(i))) {
                    isValid = false;
                    break;
                }
            }
        }

        if (isValid) {
            System.out.println("Valid");
        } else {
            System.out.println("Invalid");
        }
    }
}
```

```
}  
}
```

Time Complexity: $O(n)$

Space Complexity: $O(1)$

Coding Question 7 – Count Error Logs

Problem Statement:

Given log levels, count how many times ERROR appears.

Sample Input:

```
5  
INFO ERROR WARN ERROR INFO
```

Sample Output:

```
2
```

Logic:

Read each log level and count how many are equal to ERROR.

Java Solution:

```
import java.util.*;  
  
public class Main {  
    public static void main(String[] args) {  
        Scanner sc = new Scanner(System.in);  
  
        int n = sc.nextInt();  
        int errorCount = 0;  
  
        for (int i = 0; i < n; i++) {  
            String log = sc.next();  
  
            if (log.equals("ERROR")) {  
                errorCount++;  
            }  
        }  
    }  
}
```

```
        System.out.println(errorCount);
    }
}
```

Time Complexity: $O(n)$

Space Complexity: $O(1)$

Coding Question 8 – Find First Pending Ticket

Problem Statement:

Given ticket statuses, print the position of the first PENDING ticket. If no pending ticket exists, print -1.

Sample Input:

```
5
RESOLVED CLOSED PENDING OPEN PENDING
```

Sample Output:

```
3
```

Logic:

Loop through statuses and print the first position where status is PENDING.

Java Solution:

```
import java.util.*;

public class Main {
    public static void main(String[] args) {
        Scanner sc = new Scanner(System.in);

        int n = sc.nextInt();
        int position = -1;

        for (int i = 1; i <= n; i++) {
            String status = sc.next();

            if (status.equals("PENDING") && position == -1) {
```

```
        position = i;
    }
}

    System.out.println(position);
}
}
```

Time Complexity: $O(n)$

Space Complexity: $O(1)$

ROUND 3 – TECHNICAL INTERVIEW 1

What happens in this round

This round checks your basic technical understanding.

The interviewer may ask questions from:

APIs

JSON

HTTP

Webhooks

Logs

Monitoring

Ticketing tools

SOPs

SLAs

Incident handling

Basic database understanding

Project explanation

Common Technical Questions with Answers

Question 1: What is an API?

API stands for Application Programming Interface. It allows two software systems to communicate with each other.

Example: A client system can send loan application data to OneFin using an API.

Question 2: What is request and response?

Request is the data sent by the client to the server.

Response is the data sent back by the server after processing the request.

Question 3: What is JSON?

JSON stands for JavaScript Object Notation. It is a lightweight data format used to send and receive data between systems.

Example:

```
{  
  "customerName": "Ravi",  
  "loanAmount": 50000  
}
```

Question 4: What is HTTP?

HTTP stands for HyperText Transfer Protocol. It is used for communication between client and server on the web.

Question 5: What are common HTTP methods?

GET is used to fetch data.

POST is used to send or create data.

PUT is used to update complete data.

PATCH is used to update partial data.

DELETE is used to delete data.

Question 6: What are common HTTP status codes?

200 means success.

201 means created.

400 means bad request.

401 means unauthorized.

403 means forbidden.

404 means not found.

500 means internal server error.

Question 7: What is a webhook?

A webhook is an automatic notification sent from one system to another when an event happens.

Example: If a payment status changes, one system can automatically notify another system using a webhook.

Question 8: Difference between API and webhook?

API usually works when one system sends a request and waits for a response.

Webhook automatically sends data when an event happens.

Question 9: What are logs?

Logs are records of application activities. They help us understand what happened in the system, when it happened, and what error occurred.

Question 10: Why are logs important in application support?

Logs help support engineers identify errors, timestamps, request IDs, failed jobs, API failures, and root causes of issues.

Question 11: What is a ticketing tool?

A ticketing tool is used to record, track, update, and close customer issues.

Examples: Jira, Freshdesk, Zendesk.

Question 12: What is SLA?

SLA stands for Service Level Agreement. It defines the expected response or resolution time for an issue.

Question 13: What is SOP?

SOP stands for Standard Operating Procedure. It is a step-by-step process that support teams follow to handle common issues.

Question 14: What is production support?

Production support means supporting the live application used by real customers. The goal is to keep the system running smoothly and resolve customer issues quickly.

Question 15: What is incident severity?

Incident severity shows how serious an issue is based on business impact.

Example: If one customer is affected, severity may be low or medium. If all customers are affected, severity is high or critical.

ROUND 4 – TECHNICAL INTERVIEW 2 / APPLICATION SUPPORT SCENARIO ROUND

What happens in this round

This round may check practical application support thinking.

The interviewer may give real-time production support scenarios and ask what you will do.

Scenario 1: Customer says API is not working. What will you do?

I will first collect details like API endpoint, HTTP method, request body, response body, status code, timestamp, and customer ID. Then I will compare the request with

documentation. I will check headers, authentication, JSON format, required fields, and error message. If it is a known issue, I will follow the SOP. If it cannot be resolved at L1 level, I will escalate it with complete details.

Scenario 2: Customer gets 400 Bad Request. What will you check?

400 usually means the request sent by the customer is incorrect. I will check missing fields, invalid JSON, wrong data type, incorrect field names, and request format.

Scenario 3: Customer gets 401 Unauthorized. What will you check?

I will check whether the API key or token is correct, whether the token is expired, whether the authorization header is missing, and whether the customer is using valid credentials.

Scenario 4: Customer gets 500 Internal Server Error. What will you do?

500 usually indicates a server-side issue. I will collect the request, response, timestamp, request ID, and steps to reproduce. I will check logs or dashboard if access is available. Then I will escalate to the development or integration team with complete details.

Scenario 5: A scheduled job failed. What will you do?

I will check the job name, failure time, error message, affected records, and dashboard alerts. I will follow the SOP for failed jobs. If restart or retry is allowed as per SOP, I will do that. Otherwise, I will escalate with complete details.

Scenario 6: A queue has too many pending items. What will you check?

I will check whether the queue is processing slowly or completely stuck. I will check dashboard alerts, error logs, recent failures, and business impact. Then I will follow the SOP or escalate to the concerned team.

Scenario 7: Customer says payment status is not updated. What will you do?

I will check the customer reference ID, transaction ID, current workflow status, last update time, webhook status, and reconciliation data. If the data mismatch is confirmed, I will document the observation and escalate if needed.

Scenario 8: Webhook is not received by customer. What will you check?

I will check whether the event was triggered, webhook URL is configured correctly, response status from customer endpoint, retry attempts, timestamp, and error logs. If the customer endpoint is failing, I will inform the customer. If OneFin system did not send the webhook, I will escalate internally.

Scenario 9: Customer is angry because issue is not resolved. What will you do?

I will stay calm, listen carefully, acknowledge the issue, and avoid arguing. I will explain that we are checking the issue with priority. I will provide realistic updates and coordinate internally for resolution.

Scenario 10: You cannot solve the issue at L1 level. What will you do?

I will not guess or give false information. I will document all details and escalate to the correct team. I will include issue summary, customer details, endpoint, request, response, status code, timestamp, screenshots, logs, expected result, actual result, and my observations.

Best Escalation Format

When escalating, include:

Customer name / ID

Ticket ID

Issue summary

Business impact

API endpoint, if applicable

Request body

Response body

Status code

Timestamp

Environment

Logs / screenshots

Expected result

Actual result

Steps already tried

Your observation

Strong escalation line:

“I will escalate the issue with complete details so that the internal team can reproduce and resolve it faster.”

ROUND 5 – MANAGERIAL ROUND

What this round checks

Role clarity

Ownership

Customer-handling maturity

Communication skills

Pressure handling

Process discipline

Learning attitude

Comfort with support role

Ability to work in production environment

Common Managerial Questions with Sample Answers

Question 1: Do you understand this is an application support role?

Yes, I understand. This is an L1 Application Support role where I will handle customer issues, follow SOPs, perform basic troubleshooting, check APIs, logs, dashboards, workflows, and escalate issues when required. I am comfortable with this role because it gives me real exposure to live applications and customer problems.

Question 2: Are you comfortable with customer interaction?

Yes, I am comfortable. I will communicate politely, listen carefully, collect complete details, avoid false promises, and provide clear updates to customers.

Question 3: How will you handle pressure in production support?

I will prioritize issues based on severity and business impact. I will handle high-impact issues first, follow SOPs, document properly, escalate when needed, and keep stakeholders updated.

Question 4: What will you do if multiple tickets come at the same time?

I will first classify tickets based on severity and impact. Critical issues will be handled first. I will update customers properly and ensure that every ticket has clear documentation.

Question 5: Why should we select you?

You should select me because I understand the nature of this role. I have basic knowledge of APIs, JSON, HTTP, and web-based systems. I also have good communication skills, patience, attention to detail, and willingness to learn. I am ready to work in application support and handle customer issues responsibly.

ROUND 6 – HR INTERVIEW

What HR checks

Communication

Confidence

Work from office comfort

Salary acceptance

Joining seriousness

Role understanding

Attitude

Relocation comfort

Professional behavior

Common HR Questions with Sample Answers

Question 1: Tell me about yourself.

Good morning/afternoon. My name is [Name]. I have completed my graduation in [Degree] from [College]. I have basic knowledge of APIs, JSON, HTTP, web-based systems, and application support concepts. I understand that this role involves customer issue handling, troubleshooting, monitoring, documentation, and escalation. I have good communication skills, I am a quick learner, and I am interested in starting my career in a production support role.

Question 2: Why OneFin?

OneFin works in the fintech technology domain and provides API-based solutions to banks, NBFCs, fintech companies, and startups. I believe this role will help me learn real product support, customer issue handling, APIs, workflows, and fintech systems.

Question 3: Why Application Support Engineer role?

I am interested in this role because it gives me exposure to live applications, production issues, customer communication, APIs, logs, monitoring, and troubleshooting. I believe this role will help me build strong technical and professional skills.

Question 4: Are you comfortable working from office in Bangalore?

Yes, I am comfortable working from office in Bangalore.

Question 5: Are you okay with the salary mentioned?

Yes, I am okay with the salary mentioned. As a fresher, my focus is to start my career in a good company, learn from real systems, contribute sincerely, and grow professionally.

Question 6: What are your strengths?

My strengths are communication, patience, quick learning, and attention to detail. I can listen carefully, understand problems, and explain things clearly.

Question 7: What is your weakness?

Sometimes I take extra time to verify my work because I want to avoid mistakes. I am improving this by following a structured process and managing time better.

8. Important Technical Topics to Revise

APIs

JSON

HTTP

HTTP methods

HTTP status codes

Webhooks

Request-response flow

Headers

Authentication

Payload

Logs

Monitoring dashboards

Ticketing tools

SOP

SLA

Incident management

Severity and priority

Escalation process

Basic SQL

Client-server architecture

SaaS basics

Banking / NBFC basic workflows

LOS / LMS basic understanding

Customer communication

Documentation

9. Project Preparation

Project questions can come in technical or managerial rounds.

Prepare your project using this format:

Project name

Problem statement

Technologies used

Main features

Your role

Database used, if any

API/backend flow, if any

Errors or challenges faced

How you solved the challenge

What you learned

Sample Project Explanation

“My project is [Project Name]. The main purpose of this project is to [Purpose]. I used [Technologies]. The main features are [Features]. My role was [Your Role]. In this project, I learned how user input flows through the application and how data is stored or processed. One challenge I faced was [Challenge], and I solved it by [Solution]. This project helped me understand application flow, basic troubleshooting, and structured problem-solving.”

How to connect your project with this role

If your project has frontend-backend flow, connect it with request-response.

If your project has database, connect it with data checking.

If your project has login, connect it with authentication.

If your project had errors, explain how you debugged them.

If your project has no API, explain the application flow clearly.

10. Resume Preparation Tips

For this role, your resume should show that you are suitable for application support and production support.

Skills to Highlight

APIs

JSON

HTTP

Webhooks

Basic SQL

Application support

Troubleshooting

Monitoring basics

Ticketing tools, if known

Communication skills

Documentation

Customer handling

Problem solving

Good Resume Lines

“Basic understanding of API request-response flow, JSON, and HTTP status codes.”

“Interested in application support, production support, troubleshooting, and customer issue handling.”

“Good communication skills with ability to document issues clearly.”

“Familiar with web-based systems and basic client-server flow.”

“Ability to follow SOPs and escalate issues with proper details.”

11. One-Day / Last-Minute Preparation Plan

Morning

Revise API basics.

Revise JSON syntax.

Revise HTTP methods.

Revise HTTP status codes.

Revise webhooks.

Revise SOP and SLA meaning.

Revise application support responsibilities.

Before Aptitude + Coding Round

Practice 10 aptitude questions.

Practice 5 reasoning questions.

Practice 5 Java programs.

Revise strings, arrays, loops, HashMap, and basic counting problems.

Before Technical Interview

Prepare API explanation.

Prepare webhook explanation.

Prepare logs explanation.

Prepare ticketing tool explanation.

Prepare “customer says API is not working” answer.

Prepare project explanation.

Before HR Round

Prepare self-introduction.

Prepare “Why OneFin?”

Prepare “Why Application Support Engineer?”

Prepare work from office answer.

Prepare salary acceptance answer.

12. Final Checklist

Updated resume

ID proof

Formal dress

Academic documents

Certificates, if any

Pen and notebook

Company overview revised

Role clarity prepared

Self-introduction practiced

API basics revised

JSON revised

HTTP revised

Webhooks revised

Status codes revised

Project explanation ready

Aptitude practiced

Coding basics practiced

Communication answers practiced

Positive mindset ready

13. Final Do's and Don'ts

Do's

Speak clearly.

Understand the role properly.

Revise APIs and JSON strongly.

Prepare HTTP status codes.

Practice basic coding.

Show customer-handling maturity.

Show willingness to work in support.

Document answers clearly.

Show attention to detail.

Stay calm in scenario questions.

Don'ts

Do not say you want only development.

Do not say support is non-technical.

Do not say you cannot talk to customers.

Do not fake API knowledge.

Do not ignore HTTP status codes.

Do not give one-word answers.

Do not panic in aptitude.

Do not blame customers.

Do not say you will directly pass every issue to developers.

Do not sound negative about work from office.

14. Final Motivation Note

Dear students, this OneFin Application Support Engineer role is a good opportunity to start your career in the fintech and SaaS product domain.

You do not need to be an advanced developer for this role. But you must have clear basics of APIs, JSON, HTTP, webhooks, troubleshooting, communication, and documentation.

Your final mindset should be:

“I understand this is an L1 Application Support role. I can handle customer issues professionally, follow SOPs, check APIs and logs, document properly, and escalate with complete details when required. I am ready to learn, improve, and support live product operations sincerely.”

Prepare well, speak confidently, and stay calm during the interview. This opportunity is achievable with focused preparation.
